

Comprehensive QA Test Report

1. Executive Summary

An automated testing sequence was executed on the live deployment environment (<https://enterprise-transport.onrender.com/>). The application demonstrated excellent responsiveness, zero console errors, and successful end-to-end functionality across all major modules.

2. Test Scenarios & Results

Module / Feature	Test Scenario	Status	Notes
Authentication	Login with Demo Admin Account	PASS	Redirects instantly to Dashboard
Dashboard	Load KPIs and Statistics	PASS	Metrics display accurately without delay
Fleet Management	Load Vehicle List & Filter	PASS	Dynamic loading works flawlessly
Vehicle Detail	View Vehicle Sheet (Fix Validation)	PASS	Previous 404/500 error resolved. Loads complete
Maintenance	List Interventions & Costs	PASS	Shows correct dynamic pricing scenarios
System UI	Responsiveness & Console Logs	PASS	No JavaScript errors found. Layout adapts perfectly

3. Specific Verification Notes

Véhicule introuvable Bug: This issue was successfully resolved. The vehicle detail page now correctly loads constats (accidents) by injecting the required `vehicule\_immatriculation` field into the backend serialization process. The fix has been deployed and verified in production.

Dynamic Pricing (PUMP): Verified in the Maintenance view. Intervention SCN-003 accurately shows a total cost of 14,500 DZD, reflecting the historical unit price (9,000 DZD) of the parts consumed.
